

1. Manual Assessment (90 Minutes)

- a. Working at a startup comes with the need for solving ambiguous problems. This assignment will evaluate your ability to work through such situations.
 - i. You will be given a GitHub repository that you will clone and work locally on your own IDE.
 - 1. Please start by taking 5 minutes to read the instructions thoroughly. They are very clear on what is and what is not allowed here.
 - 2. Please ensure that you turn off copilot and other similar features.
 - 3. This assignment will be in react/TS
 - ii. Read through the instructions very carefully when you start this assignment.
 - iii. Feel free to use the internet if you get stuck. Just make sure to write your own code.
 - 1. DO NOT USE
 - a. External Libraries
 - b. ChatGPT or Stack Overflow or any other tool where you copy and paste code. You should write your own code
 - 2. Do use
 - a. The libraries already created for you (they may be able to help you if you get stuck).
 - b. External resources like docs etc to help unblock yourself.
- b. To prepare:
 - i. [SSML Docs](#) - Part of the challenge will be parsing SSML text
 - ii. Review [Custom hooks](#) in React
 - iii. Please also review React/TS fundamentals prior to starting
